## use case

Package in package 'differ'

use case

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 04/07/2020. Last modified 07/07/2020

## use case diagram

Use Case diagram in package 'use case'

use case

Version 1.0

Eugeniu Costetchi created on 04/07/2020. Last modified 08/07/2020

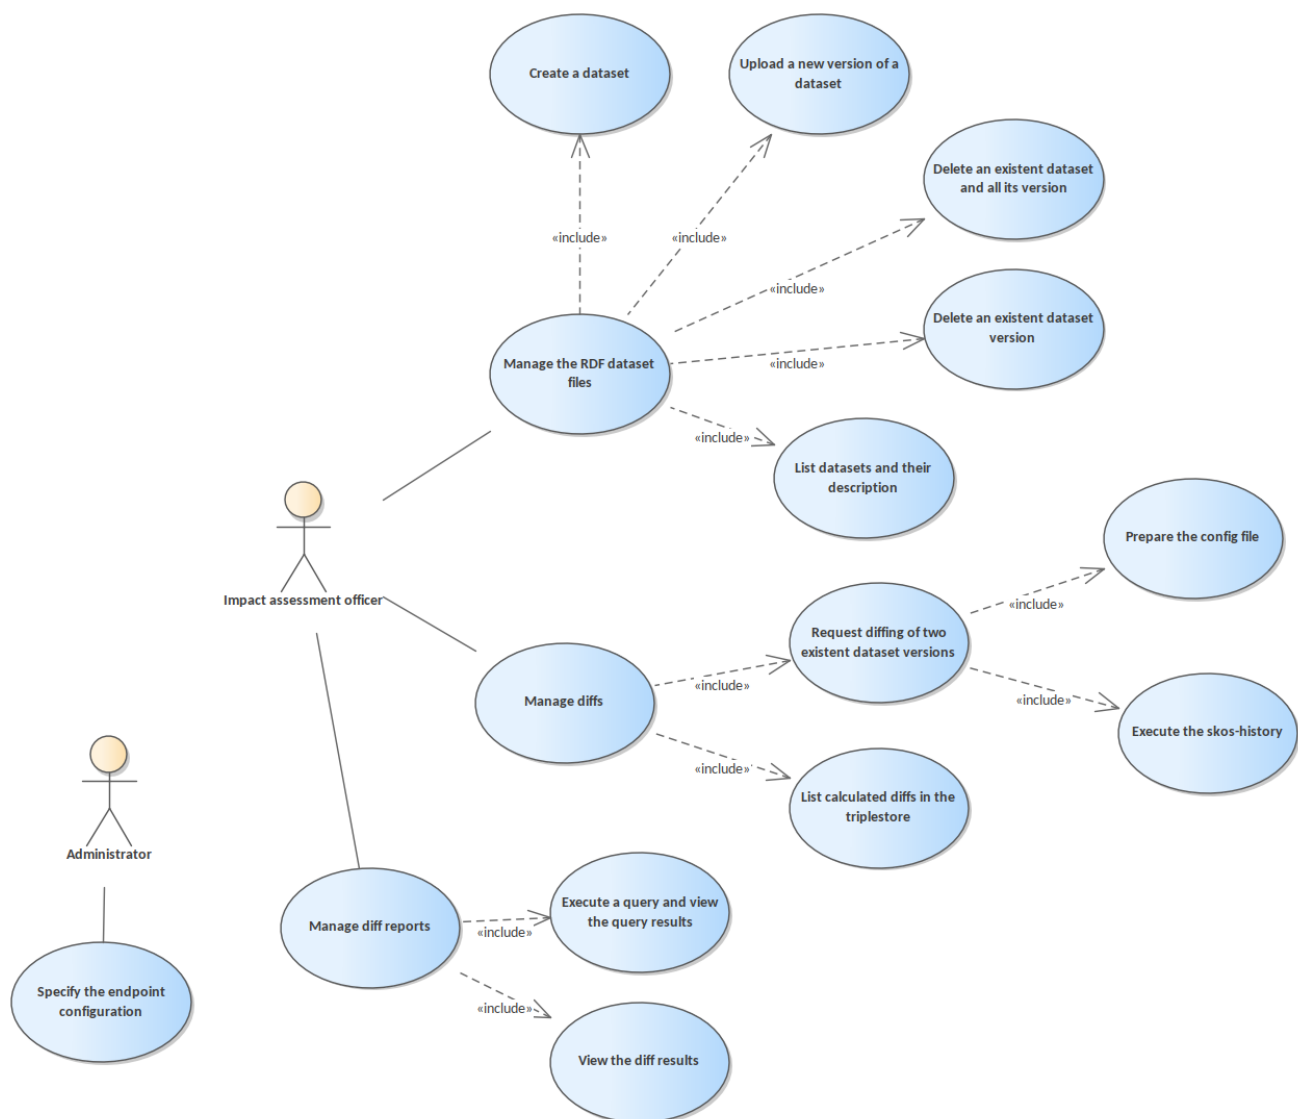

Figure 4: use case

## Create a dataset

### UseCase in package 'use case'

**User:**

- provide the dataset name and URI and optionally a description

**System:**

- saves the information

Create a dataset

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 08/07/2020

CONNECTORS	
 <b>Trace</b> «trace» Source -> Destination	
From: Create a dataset : UseCase, Public	
To: File manager : Component, Public	
<hr/>	
 <b>Include</b> «include» Source -> Destination	
From: Manage the RDF dataset files : UseCase, Public	
To: Create a dataset : UseCase, Public	

## Manage diff reports

### UseCase in package 'use case'

Manage diff reports

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 08/07/2020. Last modified 08/07/2020

CONNECTORS	
 <b>Include</b> «include» Source -> Destination	
From: Manage diff reports : UseCase, Public	
To: View the diff results : UseCase, Public	
<hr/>	
 <b>Include</b> «include» Source -> Destination	
From: Manage diff reports : UseCase, Public	
To: Execute a query and view the query results : UseCase, Public	

## View the diff results

### UseCase in package 'use case'

**User:**

- select an aspect of the diff in question (and implicitly a query)
- query the selected diff from a given dataset

**System:**

- execute the query on the dataset diff
- provide the resultset corresponding to the query

[View the diff results](#)

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 07/07/2020

**ELEMENTS OWNED BY View the diff results** Execute a query and view the query results : UseCase**CONNECTORS**

 **Include** «include» Source -> Destination  
From: Manage diff reports : UseCase, Public  
To: View the diff results : UseCase, Public

## Execute a query and view the query results

*UseCase owned by 'View the diff results', in package 'use case'*

Execute a query and view the query results

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 05/07/2020

**CONNECTORS**

 **Include** «include» Source -> Destination  
From: Manage diff reports : UseCase, Public  
To: Execute a query and view the query results : UseCase, Public

## Manage diffs

*UseCase in package 'use case'*

User:

- load the dataset versions into triplestore
- request diffing of dataset versions
- request the list existent diffs in the triplestore

Manage diffs

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 07/07/2020

**ELEMENTS OWNED BY Manage diffs** List calculated diffs in the triplestore : UseCase Request diffing of two existent dataset versions : UseCase**CONNECTORS**

CONNECTORS	
 <b>Include</b> «include» Source -> Destination	
From:	Manage diffs : UseCase, Public
To:	Request diffing of two existent dataset versions : UseCase, Public
 <b>Trace</b> «trace» Source -> Destination	
From:	Manage diffs : UseCase, Public
To:	RDF Differ Core : Component, Public
 <b>Include</b> «include» Source -> Destination	
From:	Manage diffs : UseCase, Public
To:	List calculated diffs in the triplestore : UseCase, Public

## List calculated diffs in the triplestore

UseCase owned by 'Manage diffs', in package 'use case'

User:

- request the inventory of datasets and diffs

System:

- lists the existent datasets
- for each dataset: query the version/delta graph to extract diff information

List calculated diffs in the triplestore

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 07/07/2020

CONNECTORS	
 <b>Trace</b> «trace» Source -> Destination	
From:	List calculated diffs in the triplestore : UseCase, Public
To:	query executer and result viewer : Component, Public
 <b>Trace</b> «trace» Source -> Destination	
From:	List calculated diffs in the triplestore : UseCase, Public
To:	diff manager : Component, Public
 <b>Include</b> «include» Source -> Destination	
From:	Manage diffs : UseCase, Public
To:	List calculated diffs in the triplestore : UseCase, Public

## Request diffing of two existent dataset versions

UseCase owned by 'Manage diffs', in package 'use case'

User:

- provides the complete information about the datasets

System:

- setup the configuration (folder structure, config file, etc.)

- execute skos-history

Request diffing of two existent dataset versions

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 07/07/2020

#### ELEMENTS OWNED BY Request diffing of two existent dataset versions

 Prepare the config file : UseCase

 Execute the skos-history : UseCase

#### CONNECTORS

 **Trace** «trace» Source -> Destination  
From: Request diffing of two existent dataset versions : UseCase, Public  
To: diff manager : Component, Public

 **Include** «include» Source -> Destination  
From: Request diffing of two existent dataset versions : UseCase, Public  
To: Execute the skos-history : UseCase, Public

 **Include** «include» Source -> Destination  
From: Request diffing of two existent dataset versions : UseCase, Public  
To: Prepare the config file : UseCase, Public

 **Include** «include» Source -> Destination  
From: Manage diffs : UseCase, Public  
To: Request diffing of two existent dataset versions : UseCase, Public

## Prepare the config file

UseCase owned by 'Request diffing of two existent dataset versions', in package 'use case'

User:

- provides the information about
  - the dataset name and (scheme) URI
  - the two version ids
  - the location of alpha and beta versions of the dataset
- the endpoint service is known at the system level

System:

- prepares the folder structure required by skos-history
- copies the files from the provided locations into the right place
- generates the database (if not already existent) in the triplestore) that corresponds to teh dataset
- generates the configuration file using the provided info

Prepare the config file

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 07/07/2020

#### CONNECTORS

**CONNECTORS**

 **Trace** «trace» Source -> Destination  
 From: Prepare the config file : UseCase, Public  
 To: diff manager : Component, Public

 **Include** «include» Source -> Destination  
 From: Request diffing of two existent dataset versions : UseCase, Public  
 To: Prepare the config file : UseCase, Public

**Execute the skos-history**

*UseCase owned by 'Request diffing of two existent dataset versions', in package 'use case'*

User:

- request execution of skos-history

System:

- executes in a new thread the bash command  
 - logs the results

Execute the skos-history

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 07/07/2020. Last modified 07/07/2020

**CONNECTORS**

 **Trace** «trace» Source -> Destination  
 From: Execute the skos-history : UseCase, Public  
 To: diff manager : Component, Public

 **Include** «include» Source -> Destination  
 From: Request diffing of two existent dataset versions : UseCase, Public  
 To: Execute the skos-history : UseCase, Public

**Manage the RDF dataset files**

*UseCase in package 'use case'*

Manage the RDF dataset files

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 05/07/2020

**ELEMENTS OWNED BY Manage the RDF dataset files**

 Delete an existent dataset version : UseCase

 Delete an existent dataset and all its version : UseCase

**ELEMENTS OWNED BY Manage the RDF dataset files**

 List datasets and their description : UseCase

 Upload a new version of a dataset : UseCase

**CONNECTORS**

 **Include** «include» Source -> Destination  
 From: Manage the RDF dataset files : UseCase, Public  
 To: Delete an existent dataset and all its version : UseCase, Public

 **Include** «include» Source -> Destination  
 From: Manage the RDF dataset files : UseCase, Public  
 To: Delete an existent dataset version : UseCase, Public

 **Include** «include» Source -> Destination  
 From: Manage the RDF dataset files : UseCase, Public  
 To: List datasets and their description : UseCase, Public

 **Include** «include» Source -> Destination  
 From: Manage the RDF dataset files : UseCase, Public  
 To: Upload a new version of a dataset : UseCase, Public

 **Include** «include» Source -> Destination  
 From: Manage the RDF dataset files : UseCase, Public  
 To: Create a dataset : UseCase, Public

 **Trace** «trace» Source -> Destination  
 From: Manage the RDF dataset files : UseCase, Public  
 To: RDF Differ Core : Component, Public

## Delete an existent dataset version

*UseCase owned by 'Manage the RDF dataset files', in package 'use case'*

User:

- select a dataset version
- user request deletion of that dataset version

System:

- deletes the record of the selected dataset version description
- deletes the associated file(s)

Delete an existent dataset version

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 05/07/2020

**CONNECTORS**

**CONNECTORS****Trace** «trace» Source -> Destination

From: Delete an existent dataset version : UseCase, Public

To: File manager : Component, Public

**Include** «include» Source -> Destination

From: Manage the RDF dataset files : UseCase, Public

To: Delete an existent dataset version : UseCase, Public

## Delete an existent dataset and all its version

*UseCase owned by 'Manage the RDF dataset files', in package 'use case'*

User:

- select a dataset
- request deletion of that dataset

System:

- deletes the record of the selected dataset version description
- deletes all the associated versions
- deletes the associated file(s) and folders for each dataset version

Delete an existent dataset and all its version

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 07/07/2020

**CONNECTORS****Trace** «trace» Source -> Destination

From: Delete an existent dataset and all its version : UseCase, Public

To: File manager : Component, Public

**Include** «include» Source -> Destination

From: Manage the RDF dataset files : UseCase, Public

To: Delete an existent dataset and all its version : UseCase, Public

## List datasets and their description

*UseCase owned by 'Manage the RDF dataset files', in package 'use case'*

User:

- request the inventory of datasets

System:

- provides the list of known datasets and their version

List datasets and their description

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 07/07/2020

**CONNECTORS**

**CONNECTORS****Trace** «trace» Source -> Destination

From: List datasets and their description : UseCase, Public

To: File manager : Component, Public

**Include** «include» Source -> Destination

From: Manage the RDF dataset files : UseCase, Public

To: List datasets and their description : UseCase, Public

## Upload a new version of a dataset

*UseCase owned by 'Manage the RDF dataset files', in package 'use case'*

User:

- select a dataset
- provides the version identifier (valid folder name)
- provides the RDF file

System:

- creates a new dataset version description
- saves the provided file

Upload a new version of a dataset

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 07/07/2020

**CONNECTORS****Trace** «trace» Source -> Destination

From: Upload a new version of a dataset : UseCase, Public

To: File manager : Component, Public

**Include** «include» Source -> Destination

From: Manage the RDF dataset files : UseCase, Public

To: Upload a new version of a dataset : UseCase, Public

## Specify the endpoint configuration

*UseCase in package 'use case'*

Initially this is a pre-defined triplestore that is running along the differ.

Eventually we can foresee configuring multiple triple stores on which the diffing may be calculated.

Specify the endpoint configuration

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 05/07/2020. Last modified 07/07/2020

## Logging

*Requirement in package 'use case'*

## System:

- log each user request and the execution result
- logging is classified on three levels: INFO, DEBUG, ERROR

Logging

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 07/07/2020. Last modified 07/07/2020

## Notifications for asynchronous actions

*Requirement in package 'use case'*

## System:

- for asynchronous actions instantiate a publish/subscribe messaging mechanism
- place notification messages when actions start (the action request and parameters) and when the action ends (the action results or errors)

Notifications for asynchronous actions

Version 1.0 Phase 1.0 Proposed

Eugeniu Costetchi created on 07/07/2020. Last modified 07/07/2020
